Pedestrian Safety Project Gains Achievement Award

In recognition of a joint project on improving pedestrian safety at unsignalized crossings, TRB's Transit Cooperative Research Program (TCRP) and National Cooperative Highway Research Program (NCHRP) have received the Institute of Transportation Engineers' Transportation Award for Pedestrians.

The project, TCRP D-08 and NCHRP 03-71, and its report, *Improving Pedestrian Safety at Unsignalized Crossings*, examines selected engineering treatments at unsignalized high-speed and high-volume roadway pedestrian crossings, and will assist transportation professionals in selecting engineering treatments to improve safety for pedestrians in these types of crossings.
