

Pavement Marking Committee  
Discussion Points Agenda

March 19, 2025

**New Business:**

**Worker safety countermeasures:**

- Provide positive protection for workers on roadways with a speed limits  $\geq$  45mph. How do we accomplish this?
  - o Use TMAs in all lanes, including shoulders
  - o Use TMAs in close proximity to workers
- Adopt existing equipment and technology to remove workers from road surface.
  - o Mobile automated longitudinal layout technology for traffic lines and paving joints. This technology exists now.

**Old business:**

~~Mobile retro readings in lieu of hand-held units.~~ **Completed**

**Acceptance of Pavement Markings - Payment and Guarantee:**

- Guarantees start from the date of acceptance. (ie. 180 days for thermo)
  - o When is "date of acceptance?"
  - o Is it after application, or after overall project completion?
    - A possible solution; request a conditional final approval for the completed section of a project.

**Work Area Pavement Markings Section 901.3(k):**

- Potential payment for temporary markings that need to be replaced due to poor environmental conditions when originally applied?
- Perhaps standardize wording in the special provisions addressing payment for re-application of temporary markings?

**TC-8600 detail clarification request update:**

- A detail is needed that shows how lane widths are measured.
  - o On a two lane road, where is the edge line located relative to the center of a double yellow?
